FRANCISZEK KOSSUT

B.SC. STUDENT IN ARTIFICIAL INTELLIGENCE | AI & SOFTWARE DEVELOPER

fkossut.inter@gmail.com | kossut.dev | GitHub | LinkedIn | +45 71 54 00 15 | Vejle, Denmark | 25/04/2008

PROFILE

I build AI systems that work end to end, from the model to the live service. I am a **national champion of the Nordic AI Cup 2026** (1st in Denmark, out of 112 teams entering the competition), where I built the first speech-to-data pipeline and my own controller for the multi-agent simulation. Since then I have shipped **an AI agent with its own MCP server** and **a 3D ring design studio that runs in the browser**. Two years of running a live Linux server on my own taught me to find the real cause of a problem before changing anything.

ACHIEVEMENTS

Nordic AI Cup 2026 - National Champion, Denmark

Team "Elysa's Secret", University of Southern Denmark - hosted by Ambolt AI, in partnership with DDSA & Pioneer Centre for AI

Write-up: *kossut.dev/nordic-ai-cup* ***GitHub:*** *github.com/emermelada/nordic-ai-cup*

• 1st in Denmark overall in a competition of 112 teams across the Nordic countries, scored on three AI challenges, and 1st in the speech-to-data challenge

• **Medical (speech to data):** built the team's first working pipeline, using faster-whisper for speech-to-text and a Qwen LLM served with vLLM that answers yes/no questions and quotes the evidence, then handed it on for further development

• **Survival (multi-agent simulation):** wrote my own agent controller from scratch, with A* path planning and predator avoidance, tuned with CMA-ES on an 8x faster copy of the simulator that I wrote; it became part of our final submission

• **Drone Flyby (object detection):** ran an ensemble of YOLO11 detection models with object tracking on drone video, and worked out that the ground-truth boxes were 3D boxes projected onto the image, which set how we drew ours

• Caught a data-validation bug that was silently corrupting our model comparisons, which changed the final decision under a single-attempt scoring rule

PROJECTS

Make-a-Ring - Browser Ring Design Studio

Oct 2026

JavaScript, three.js, Web Workers, Web Audio, HTML/CSS

Live: *make-a-ring.deployxa.online* ***GitHub:*** *github.com/FearedLynx/make-a-ring*

• A studio where people who are not jewellers design a ring from 50 patterns or their own drawn tile, try it on a real picture or a 3D hand at their real size, and download a print-ready file

• Designed and built the first version alone, then developed it further for the HyperBloom October 2026 UI/UX hackathon: studio layout, pattern editor, size drawing, motion and sound, and an 8-page brand guide

Product Listing Agent - MCP Server for Claude

Oct 2026

Python, MCP (Model Context Protocol), Claude, pytest, GitHub Actions

GitHub: *github.com/FearedLynx/product-listing-agent-mcp*

• An AI agent for an online shop: my MCP server gives Claude six tools over a product catalogue (products, sales and stock, brand voice guide, draft checker, saving)

• 12 automatic brand rules: the agent drafts, checks and fixes listings, and the save tool refuses anything that fails. Tested by 18 pytest cases and an end-to-end MCP test in CI

MealPlanner App

React Native, TypeScript, Expo, SQLite, Claude Code

GitHub: *github.com/FearedLynx/MyFridgeApp*

• Built a 10-screen mobile app from scratch: recipe browsing with filters, fridge-based shopping lists, calorie tracking and voice-controlled recipe search, shipping new features based on real daily use

EXPERIENCE

Server & Website Manager - Self-Employed

Sep 2023 - Jul 2025

Independent project, hosted on OVH Cloud

• Administered a Debian Linux server hosting a live community platform for 50+ concurrent users, resolving production issues such as permission errors and configuration failures with no support team

• Ran security, updates, backups and cross-version migrations, alongside marketing and content creation to grow the user base

• Built Excel spreadsheets to analyse user engagement data and improve communication workflows

3D Character Artist - Self-Employed *Sep 2025 - Sep 2026*

Fsski Creations

• Modelled and textured stylized 3D characters in Blender, optimized separately for resin and FDM filament printing

• Handled the full production pipeline: rigging, shading, texture painting, rendering and product-style advertisement visuals

• Took the product line from concept to launch-ready for Kickstarter, and promoted it on community platforms

Kitchen Assistant *Jul 2025 - Sep 2025*

Nabutok Sushi

• Worked under time pressure in a fast-paced kitchen, communicating in English throughout

Salesperson *Apr 2023 - Jan 2024*

Private Polish Company

• Handled direct customer service and price negotiation

EDUCATION

B.Sc. in Artificial Intelligence *Sep 2026 - present*

University of Southern Denmark (SDU), Vejle

High School with Bilingual Classes (named after Adam Mickiewicz) *Piastów, Poland*

Advanced track: Mathematics, Computer Science, and English

• Solved 75+ algorithmic problems in Python, implementing classics such as GCD, prime factorization and quicksort from scratch, and analysed datasets in Excel and multi-table Access databases with SQL

SKILLS

• **Programming** - Python, SQL, HTML/CSS

• **AI & automation** - Claude Code, MCP servers, Copilot, LLM and computer-vision pipelines, workflow scripting

• **Linux server administration** (Debian, SSH, Caddy, Hiawatha) - maintenance, permissions and security, troubleshooting

• **Data** - Excel, Access and SQLite databases

• **3D modelling & printing** - Blender, Bambu Lab, UltiMaker Cura, resin and filament optimization

• **Teamwork & communication** - coordinating parallel work under hard competition deadlines, and explaining technical decisions in plain language

LANGUAGES

Polish: Native **English:** C1 (IELTS certified) **Spanish:** Basic

ADDITIONAL

• Competitive sabre fencer, 2016-2025, including international tournaments

• Hobbies: strategy card games, product development

I hereby give consent for my personal data included in this application to be processed for the purposes of the recruitment process under Regulation (EU) 2016/679 (GDPR).
